your 2x ROAS is still

LOSING

money on every single sale...

Meta only counts

SALES

but never what each sale actually costs you...

let's use one example...

YOU SELL A SUPPLEMENT FOR *$40*

before you keep a cent, you pay for:

×	making the product	$12
×	packing it	$3
×	shipping it	$8
×	card fees	$2

what you keep...

$15

example numbers

01 / 03

THAT'S YOUR *limit*

$15

is the most you can spend on ads to win one sale.
spend more, and that sale loses money...

02 / 03

NOW YOUR ADS *run*

each sale costs you this much in ads:

$20

so Meta sees $40 in sales for $20 in ads. $40 ÷ $20 = 2x ROAS. all green...

PUT THEM *side by side*

–	you spent on ads	**$20**
–	you could afford	**$15**

-$5

on every sale. therefore, the more you scale, the more you lose...

the fix isn't a new ad...

NOW SELL 2 FOR *$65*

shipping is still one package, so you pay:

×	making 2 products	**$24**
×	packing them	**$4**
×	shipping them	**$8**
×	card fees	**$2**

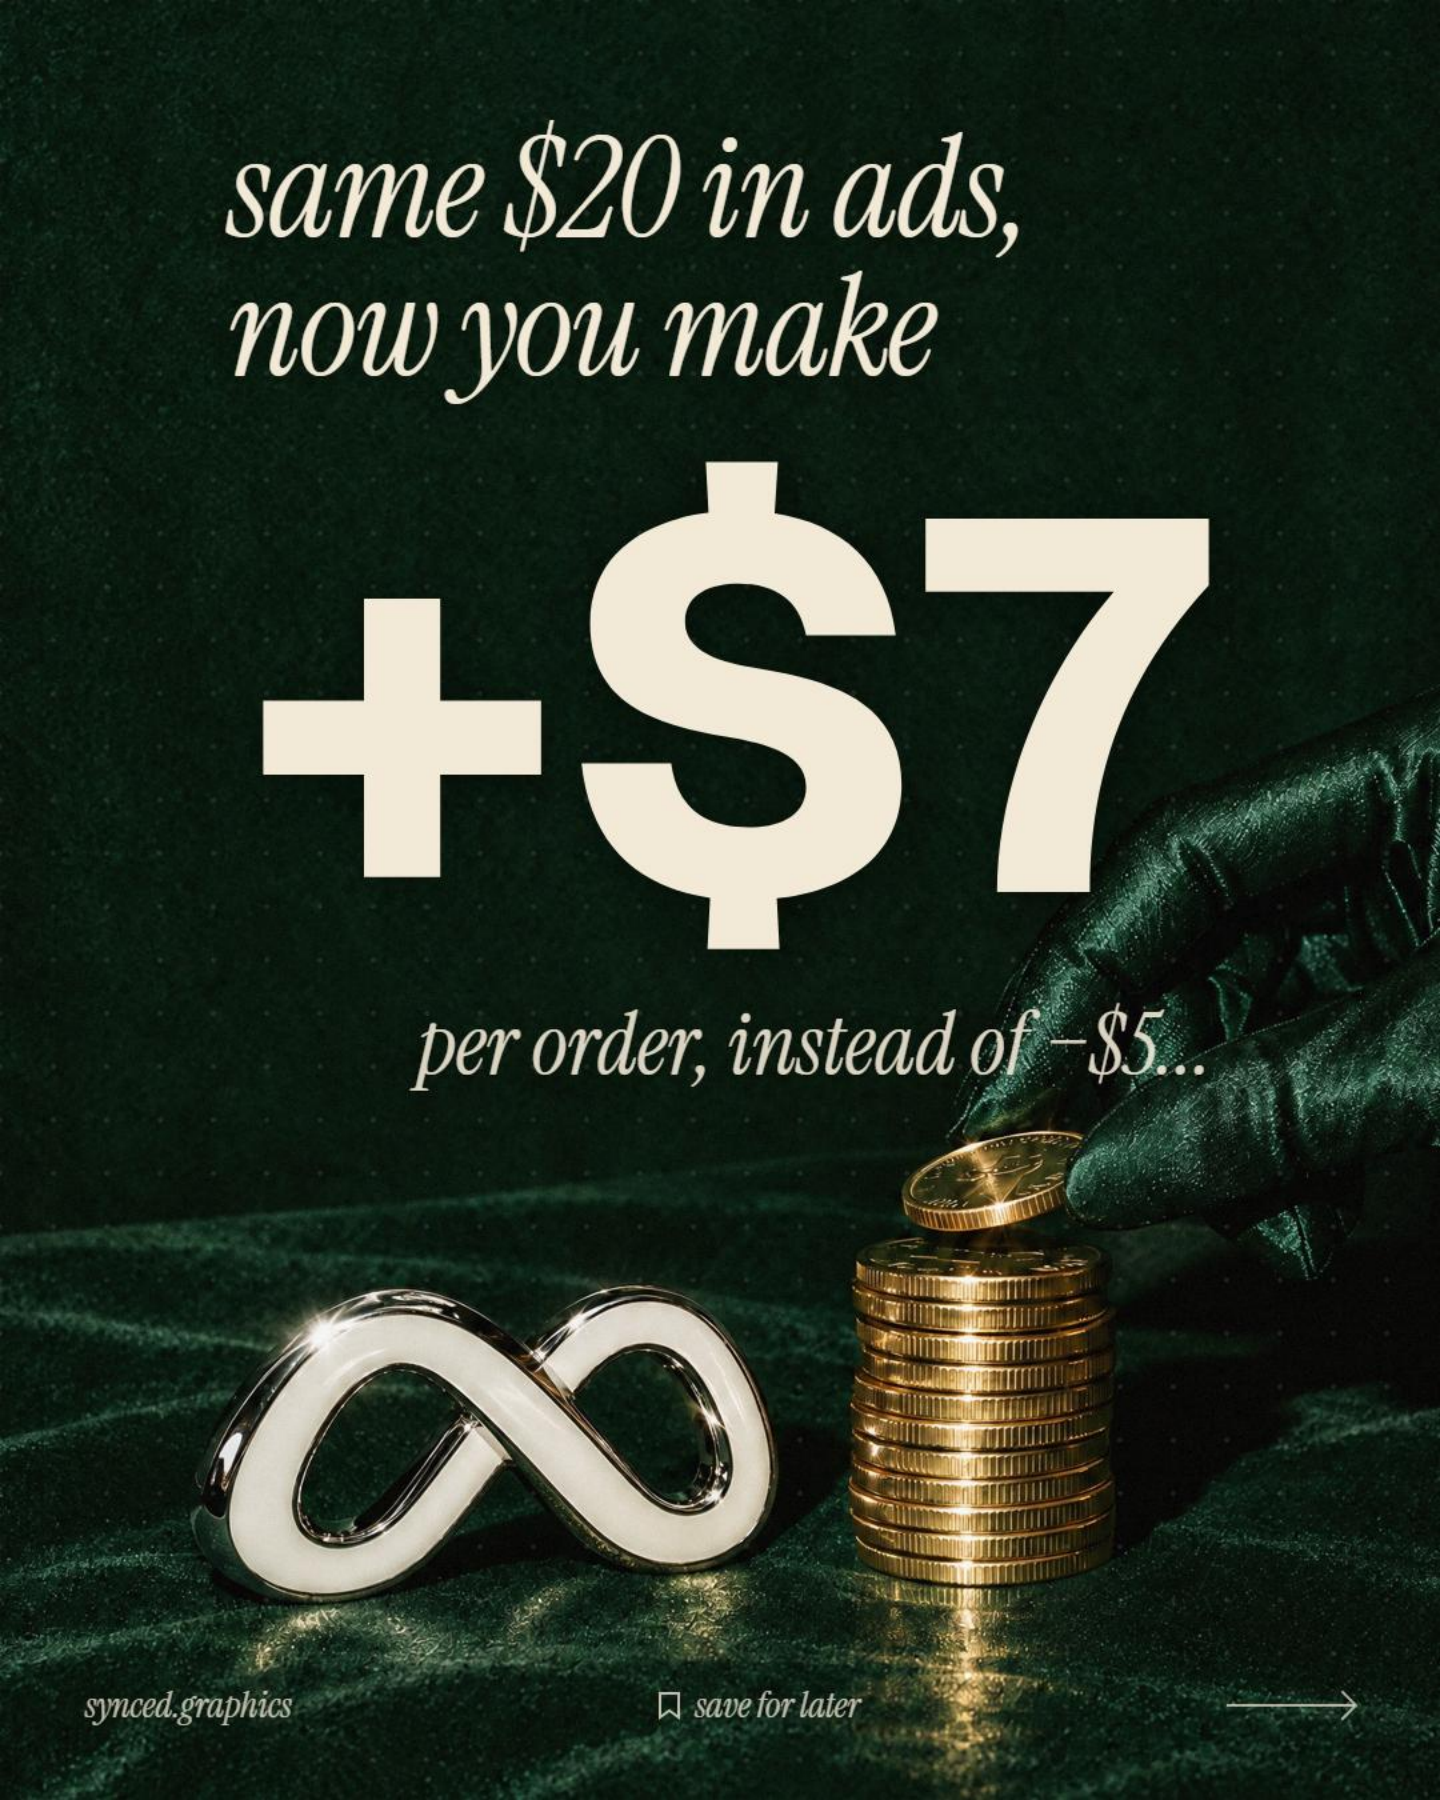

what you keep now... **$27**

example numbers

same $20 in ads,
now you make

+$7

per order, instead of −$5...

it was never

THE ADS

it was how much each order leaves you...
