3 hidden reasons your Meta ads

STOPPED WORKING

and none of them is the creative...

synced.graphics

META ADS

ads keep working while you can

AFFORD

to feed Meta. here's where that money leaks...

synced.graphics

META ADS

REASON 01 / 03

CUSTOMERS GOT *pricier*

Meta finds the cheapest buyers first. then they run out, and each new one costs more...

– a $40 order leaves you **$15**

– the next customers cost **more**

past $15 a customer, every sale loses money. and cutting the budget teaches Meta even less...

META ADS

REASON 02 / 03

THE PAGE BROKE THE AD'S *promise*

- ✕ free shipping in the ad, a fee at checkout
- ✕ a bundle in the ad you can't find on the page

people leave, you paid for the click, and Meta learns that your clickers don't buy...

REASON 03 / 03

YOU DISCOUNTED YOUR WAY *down*

— full price $40, you keep	**$15**
— 20% off, $32, you keep	**$7**

the ROAS you need just to break even:

— at full price	**2.7**
— after 20% off	**4.6**

one discount, and the same ads now have to work almost twice as hard...

example numbers

find yours in 5 minutes...

CHECK THESE *in order*

01 work out what one order leaves you

02 price ÷ that = your break-even ROAS

03 more discounts lately? check order value

04 tap your ad on your phone: does the page keep its promise?

fix the numbers, then

the page, and the

ADS LAST

most founders start with new creative and never find the real problem...
