you don't need ten Meta campaigns, you need

TWO

and one simple line to judge them...

synced.graphics

META ADS

one campaign to test, one to

SCALE

and one line that tells you which is which...

synced.graphics

META ADS

WHY TEN FAIL

TEN CAMPAIGNS, *no winner*

an ad set needs about 50 sales a week to learn, per Meta's guidance...

- ✕ split the budget ten ways
- ✕ nothing ever gets there

the whole structure...

TEST, THEN *scale*

01 TEST: 3 to 5 new ads a week, about 25% of the budget

02 SCALE: winners only, the rest of the budget

MOVING WINNERS

MOVE IT WITH ITS *post ID*

when an ad wins in testing, move it to scaling using its post ID. the likes and comments come with it...

→ raise the budget about 20% at a time

the one line...

$15

THE MOST A CUSTOMER CAN COST YOU

below it, scale. above it, change something, whatever Ads Manager's ROAS says...

example numbers

META ADS

THE ROUTINE

20 MINUTES EVERY *Monday*

01 move test winners below the line to scaling

02 turn off clear losers, add 3 new angles

03 scaling still below the line? raise it 20%

two campaigns,
one line, and a
MONDAY
routine. that's the whole system...
